

## Company Profile

With over 23 years experience in the field of water treatment, our primary focus is helping customers optimize their TCO by creating an additional choice of a working environment of self performing using on site as well as Web based consulting and on site service

We recognize that having the right equipment is important. We have implemented an e-commerce site that will give you multiple choices on major brands at a fair discounted rate. <http://wamsupplies.com>

You have choices with WAM allowing you to make informed decisions specifically designed to meet your particular needs of your plant: 1) Full service, 2) Traditional service, or 3) Self-performance with consulting services available either on site or on-line

As your consultants, we will provide best practices as do the traditional providers. If needed, we will work with these providers in order to keep you current with the latest technologies.

WAM's principle focus is on driving the program results to reduce your costs by using the quality improvement process utilizing the tools of SPC. WAM will provide complete analysis affording you justification for budget requests to move your facility forward.

With considerable research, we have come to the conclusion that there is (non-chemical program) that works and if it is the right choice for the customer we will support and recommend it's use. This support, however, comes only if with the needed monitoring tools are in place to insure its proper operation.

We are growing with our customers – sharing in their success by being an integral part of their profit picture rather than a simple cost of doing business.

## New Patented Technology for Cooling Tower Treatment -Water Conservation ZERO Bleed Silica based Technology

... eliminate corrosion, scale, and biological growth in cooling towers  
..... with "green chemistry" that reduces water use, chemical waste and cost  
.... low corrosion rates on all metals including aluminum and copper  
... help sustain our water sources and environment!

### Our Mission & Program Proviso

To provide our customers a **REAL** choice in water use reduction, eliminating chemical additives while addressing scale, corrosion, fouling and biological growth in cooling tower operations. .

#### Simply Stated

The tower water is cycled up to >50 true cycles (TDS up to as much as 15,000 and higher) – eliminating blow down. A proprietary soft water conditioner is used to eliminate hardness ions, run pH 9-10 and silica levels >200 - 600ppm. Biological growth is controlled by the high pH.

What we are not! - is illustrated below

### WAM consultant process startup and continuous program support

- 1) Source chemical products – continually providing highest quality – highest value technology for boiler pretreatment, condensate, cooling water, closed loops, waste treatment and process coolants.
- 2) Source testing supplies sufficient to evaluate all programs.
- 3) Provide initial training and subsequent material to fully facilitate in house management of the program.
- 4) Implement Federal, State and local Legionella prevention practices for towers - using OSHA, ASHRAE CTI and or AWT recommendations
- 5) Consultant services will be included in all equipment inspections; providing analysis & recommendations based on results.
- 6) Visit each facility at least once a quarter for Q&A, situational analysis along with program reviews.
- 7) Provide forward moving recommendations to facility personnel and management; incorporating the Quality Improvement Process utilizing statistical process control in evaluation and return on investment.
- 8) Investigate new technologies to help reduce their dependency of chemical additives.
